DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 1-12, pertaining to a method of forming an active device including a first and second patterning to define a first and second feature of the active device, respectively;

Species 2, claims 13-24, pertaining to a method of forming diodes in an array including performing a first patterning operation on a P or N type layer to form a first plurality of strips and a second patterning on the first set of strips sequentially;

Species 3, claim 34, pertaining to a method of forming a pillar on a wafer by patterning a plurality of layers in a first direction and patterning the layers in a second different direction;

Species 4, claims 35-41, pertaining to a method of forming an active device including a first patterning to define a first terminal of the active device, and a second patterning to define a first feature of an active device;

Species 5, claims 42-51, pertaining to a method of forming diodes in an array including a first patterning of a first silicon layer to form a first plurality of strips and a second patterning to define one feature of a plurality of diodes from the first silicon layer;

Species 6, claims 52-55, pertaining to a method of isolating pillars on an IC, including forming a first and second anisotropic etch on patterned structures to form functional pillars;

Art Unit: 2813

Species 7, claims 56-67, pertaining to a method of forming diodes in an array, including patterning the first plurality of layers including an N and P+ layers sandwiching an antifuse layer and a second patterning on at least the N layer of the first set of strips.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2813

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
